

SmartCEMS[®] Compliance Assurance Monitoring Systems

Product Overview

The **SmartCEMS[®] Compliance Assurance Monitoring System** is a complete system that provides continuous data recording and report generation compliant under U.S. EPA Compliance Assurance Monitoring (CAM) regulations. The system comes with a data acquisition component and is guaranteed to meet CAM and U.S. EPA standards for combustion turbines and gas/oil fired boilers, or heaters. The data acquisition and handling system (DAHS) provides a secure and reliable means of collecting, storing, and reporting compliance data and generating the electronic data reports. The CMC CAMS is an acceptable regulatory solution under the existing and proposed U.S. regulations where continuous emissions monitoring systems (CEMS) for source emissions compliance are not required.

The SmartCEMS Compliance Assurance Monitoring System can be used on most combustion sources that fire gaseous or liquid fuels and for most compliance parameters such as NO_x, SO₂, CO, CO₂, O₂, H₂S, hydrocarbons, ammonia, and formaldehyde just as a few examples. The software is easy to setup and configure with a non-proprietary user interface and other advanced features that make it cost effective to maintain.

Product Features

- Two (2) Pollutants Standard
- Interface to DCS or control PLC
- Compliance and software guarantee
- Engineering and model development
- Capable of being upgraded to compliance PEMS
- Initial guarantee and support for one year after
- Oxygen Analyzer module (O₂ and CO₂ calculated)
- Uses industry standards (i.e. OPC, DDE, MODBUS, etc.)
