The SmartCEMS®-60 PEMS or predictive emission monitoring system (PEMS) is a complete system that provides continuous data recording and report generation compliant under U.S. EPA 40 CFR Part 60 regulations. The system comes with a data acquisition component and is guaranteed to meet 40 CFR Part 60, Appendix B, PS-16 audit standards on combustion turbines and gas/oil fired boilers, or heaters. The data acquisition and handling system (DAHS) provides a secure and reliable means of collecting, storing, and reporting compliance data. The CMC PEMS is an acceptable regulatory alternative under the existing and proposed U.S. Federal and State regulations where continuous emissions monitoring systems (CEMS) for source emissions compliance are required.

SmartCEMS-60 PEMS can be used on most combustion sources that fire gaseous or liquid fuels and for most compliance parameters such as NO\textsubscript{x}, SO\textsubscript{2}, CO, CO\textsubscript{2}, O\textsubscript{2}, H\textsubscript{2}S, hydrocarbons, ammonia, and formaldehyde just as a few examples. The software is easy to setup and configure with a non-proprietary user interface and other advanced features that make it cost effective to maintain.

**Product Overview**

- Two (2) Pollutants Standard
- Interface to DCS or control PLC
- Engineered and model development
- Compliance and software guarantee
- Certification guarantee and support
- Initial guarantee and support for one year
- Oxygen Analyzer module (O\textsubscript{2} and CO\textsubscript{2} calculated)
- Complete model performance testing and report
- PS-16 Test Compliant Interface to data acquisition system
- Data acquisition and handling system (can be third party)
