

SmartCEMS[®] Developer

Product Overview

The **SmartCEMS[®] Developer** package is a set of materials including PEMS development documentation and tools for the PEMS developer to be used to build models for use with CMC PEMS products. The developer package allows end users and third party entities to build, support, maintain, and improve PEMS models using CMC technology. The package includes minimum training to get the development tools installed on a development machine provided by the customer to support PEMS installed elsewhere.

The SmartCEMS Developer package includes training, development tools and platform, and source code to allow for customization of the PEMS product line. Products configured with the developer package include PEMS Analyzer, Continuous Parametric Monitor, Alternative Emission Monitor, and Compliance Assurance Monitor. The software is easy to setup and configure with a non-proprietary user interface and other advanced features that make it cost effective to maintain.

Product Features

- Support for one year
- Training for up to five persons
- CMC PEMS software development version
- Platform software and development tools
- Compiler application for custom PEMS code
- CMC PEMS configuration tools development version
